KoinModule

koin module is a way to provide the dependencies for a feature or a module. It is a way to group the dependencies that are needed for a feature or a module.

In my opinion, all of these koin modules should group together by functionality. If we do this, we can easily identify which module is related to which feature not like a current situation.

```
modules(  
    koinModules01() +  
    koinModules02() +  
    koinModules03() +  
    koinModules04() +  
    koinModules05() +  
    koinModules06() +  
    koinModules07() +  
    koinModules08() +  
    koinModules09() +  
    koinModules10() +  
    koinModules11() +  
    c3Modules() +  
    composeNavigationModules +  
    coilModule() +  
    composableComponentsModule() +  
    debugToolsModules  
)
```

koinModules01

```
val koinModules = listOf(  
    newOrderWelcomeKoinModule,  
    loadOrdersKoinModule,  
    orderDetailsKoinModule,  
    carDetailsKoinModule,  
    orderStatusKoinModule,  
    orderStatusV2KoinModule,  
    orderDetailsV2KoinModule,  
    noOrderFoundKoinModule,  
    errorStatusKoinModule,  
    ordersListKoinModule,  
    fullScreenCarouselActivityModule,  
    fullScreenCarouselKoinModule  
)
```

```
// CbvSubscriptions  
val koinModules = listOf(  
    orderSubscriptionKoinModule,  
    subscriptionDetailsKoinModule,  
    insuranceCardViewModule,  
    paymentDetailsKoinModule,  
    cbvDocumentsKoinModule,  
    pdfViewerActivityModule,  
    pdfViewerKoinModule  
)
```

```
private fun cbvModules() =  
    OrderTracking.koinModules +  
    CbvSubscriptions.koinModules +  
    listOf(  
        cbvContactInformationModule,  
        cbvMileageProvider  
    )
```

```
private fun homeTabModules() = listOf(  
    climateBottomSheetDialogKoinModule,  
    climateEditTimerFragmentKoinModule,  
    climateFragmentKoinModule,  
    climateMCATimerFragmentKoinModule,  
    climateTabFragmentKoinModule,  
    climateTimerFragmentKoinModule,  
    homeFragmentKoinModule,  
    myCarToolboxViewModule,  
    myCarContainerViewModule,  
    scheduleChargeGuidanceViewModule,  
    scheduleChargeSettingsViewModule,  
    iCupScheduleChargeSettingsViewModule,  
    recentLocationPickerViewModule,  
    chargeRemindersSettingsViewModule,  
    OtaComplete.domainModule,  
    otaCompleteViewModule,
```

```

securityFragmentKoinModule,
nonConnectedAppointmentViewModule,
vehicleDetailViewModule,
vehicleWarningsViewModule,
)

```

```

val rootFragmentsModules =
    homeTabModule +
        carTabModule +
        nonConnectedRootModule +
        orderRootModule +
        rootFragmentModule<MapRootFragment> {} +
        rootFragmentModule<VOCMOMapRootFragment> {} +

```

```

fun koinModules01() = rootFragmentsModules + cbvModules() + homeTabModules()

```

- `OrderTracking.koinModules`
 - this koin module is seemed to provide the dependencies for the OrderTracking feature. Our China Region has our own order track feature and didn't use the global one.
- `CbvSubscriptions.koinModules`
 - this koin module is seemed to provide the dependencies for the subscription feature. Most of them are not for China region. but, in this koin module, there are some dependencies that are used in China region. like the `pdfViewerActivityModule` and `pdfViewerKoinModule`.
 - need to be clarified with the team to decide whether to move these dependencies to the other common koin modules.
- `cbvContactInformationModule`
 - this module is seemed to provide the dependencies for the contact information feature. seems our China region doesn't use this feature.
- `cbvMileageProvider`
 - this feature is used to provide the vehicle dashboard feature, this could be moved to common modules.
- `homeTabModules`
 - `climateBottomSheetDialogKoinModule`,
 - `climateEditTimerFragmentKoinModule`,
 - `climateFragmentKoinModule`,
 - `climateMCATTimerFragmentKoinModule`,
 - `climateTabFragmentKoinModule`,
 - `climateTimerFragmentKoinModule`,
 - the feature above is about climate control feature, this feature is used in China region. and need to be moved to common

modules. Also these modules seems need to group together.

- `scheduleChargeGuidanceViewModule`,
- `scheduleChargeSettingsViewModule`,
- `iCupScheduleChargeSettingsViewModule`,
- `recentLocationPickerViewModule`,
- `chargeRemindersSettingsViewModule`,
 - the feature above is about schedule charge feature, this feature is used in China region. and need to be moved to common modules.
- `OtaComplete.domainModule`,
- `otaCompleteViewModule`,
 - the feature above is about OTA feature, used for ota update, this feature is used in China region. and need to be moved to common modules.
- `securityFragmentKoinModule`,
 - the feature above is about security feature, used for lock/unlock,(when the user click lock/unlock, it shows a fragment dialog to authenticate users through biometric recognition)this feature is used in China region. and need to be moved to common modules.
- `nonConnectedAppointmentViewModule`,
 - looks like this feature is used for service booking, this feature is not used in China region. and need to be moved to only global modules.
- `vehicleDetailViewModule`,
 - China has it's own vehicle detail view, this feature is not used in China region. and need to be moved to only global modules. (looks like this is only for china flavor in global app? if it is so, it can be removed both in global and china repo)
- `vehicleWarningsViewModule`,
 - I'm not sure if China has already adopted this feature .But this view is more related to service booking, so I guess we didn't be using it.
- `myCarToolboxViewModule`
- `myCarContainerViewModule`
 - This two modules are used for the toolbox feature, this feature is only used in China region. and need to be moved to China modules. Also this toolbox view should remove in global repo.
- `homeTabModule`
- `carTabModule`
 - this modules above are seemed to provide the dependencies for the home tab(car tab) feature. this feature is used in China region. and need to be moved to common modules.
- `nonConnectedRootModule`
 - china doesn't need this feature, this can move to global only
- `orderRootModule`
 - China has its own order tracking feature, this can move to global only
- `rootFragmentModule<MapRootFragment> {}`

- `rootFragmentModule<VOCMOMapRootFragment> {}`
 - This is used for car locator feature, this feature is used in China region. and need to be moved to Common modules.
- `supportTabModule`
- `profileTabModule`
- `profileTabViewModule`
- `profileTabComposeModule`
 - these feature above is all for global only , and need to move to global only modules.

        orderTrackingTimelineViewModule,
    )
}

```

- **profileModules**
 - China has it's own profile module, which is different from the global profile module. these modules could move to global only modules.
- **VocDialog.koinModules**
 - This is a full screen dialog, used for notice user when the vehicle relationship is broken. China is also use this dialog, this can move to common modules.
- **ICup.koinModules**
 - This is a module for the iCup feature, China is also using this feature, this can move to common modules.
- **onboardingSupportModules** Looks like those modules is all related global support views. This doesn't used in china feature. They all can move to Global Only
 - supportViewModule
 - supportTabRootModule
 - supportTabComposeModule
 - supportUiModule
 - supportBaseKoinModule
 - supportActivityModule
 - contactVolvoKoinModule
 - supportPageKoinModule
 - roadsideAssistanceViewModule
 - urgentlyKoinModule
 - chatKoinModule
 - ChatPageKoinModule
 - NativeChatConversationPageKoinModule
 - supportCarSelectorKoinModule
 - supportSearchKoinModule
 - articleDetailKoinModule
 - askFeedbackKoinModule
 - thanksFeedbackKoinModule
- **iCupPairingModules**
 - This module is related to icup device pairing , China need this modules to connect with icup and should move to common modules.
- **OrderTrackingUI.koinModules**

- This module is related to the order tracking feature, China has it's own order tracking feature, this module should move to global only modules.
- `DsbDependencies.koinModules`
 - This module is related to the DSB feature, China has it's own DSB feature, this module should move to global only modules.
- `addCarViewModule`
 - This list of modules are related to connect a new vehicle . China need these modules and should move to common modules.
- `nonConnectedCarManagementViewModule`
 - This list of modules are related to manage the non connected vehicles. China need these modules and should move to common modules.

koinModules03

```
fun koinModules03() = listOf(
    vccExternalAPINetworkModule,
    parkopediaClientModule,
    aqiClientModule,
    hereWeatherClientModule,
    weatherModule,
    sessionKoinModule,
    sessionModule,
    analyticsModule,
    bottomTabsActivityModule,
    homeTabModule,
    startActivityModule,
    modalActivityModule,
    feedbackActivityModule,
    standAloneActivityModule,
    newPairingActivityModule,
    cloudTermsAndConditionsActivityModule,
    welcomeViewModule,
    regionSelectionViewModuleLegacyNavigation,
    otaErrorViewModule,
    guidesFeedKoinModule,
    feedbackModule,
    climateEditTimerDaysFragmentKoinModule,
    pushSettingsModule,
)
```

- `vccExternalAPINetworkModule`
 - This module is just a retrofit and okHttp client. This module is used to make network calls to the VCC external API. It looks like this is for AQI, Weather, and Parkopedia. This module is necessary for the China region. Need to move to common module
- `parkopediaClientModule`
 - This module is used to make network calls to the Parkopedia API. Sounds like this api is used for get parking spots globally. Maybe it's used in find my car. This module is necessary for the China region. Need to move to common module. also, **in the future, do we have a chance to migrate to our China owned parking api? from AMap? @Rui**
- `aqiClientModule`
 - This module is used to make network calls to the AQI API. This module is necessary for the China region. Need to move to common module
- `hereWeatherClientModule`
 - This module is used to make network calls to the Here Weather API. This module is necessary for the China region. Need to move to common module
- `weatherModule`
 - This module is used to provide weather data. It will provide weather data by region. It will show the aqi and weather data. This module is necessary for the China region. Need to move to common module
- `sessionKoinModule`
 - This module is used to provide setting, tsp account relationship, weather utils and so on. This module is necessary for the China region. Need to move to common module

- **sessionModule**
 - This module is used to provide the current vehicle session. This module is necessary for the China region. Need to move to common module
- **analyticsModule**
 - This module is used to provide analytics. China dependent this module to resend the analytics data. This module is necessary for the China region. Need to move to common module
- **bottomTabsActivityModule**
 - This module is used to provide the bottom Tabs activity. This module is necessary for the China region. Need to move to common module
- **homeTabModule**
 - This module is duplicate with **koinModules01.homeTabModule**. This module is necessary for the China region. Need to move to common module
- **startActivityModule**
 - This module is used to provide the start activity. I noticed that global will deprecate this Activity and use **CommonCompseActivity**. This module is now necessary for the China region. **We are migrating this to Our owned ComposeStartActivity(already started,on a single decouple branch). But currently,Need to move to common module.**
- **modalActivityModule**
 - **I'm not sure about this module.** It's also an Activity for climate,pre cleaning, and so on.
- **feedbackActivityModule**
 - China has our own feedback fragment, So this module is not necessary for China region. It can move to global only modules. Also, maybe global will deprecate this Activity?
- **standAloneActivityModule**
 - This module is used to provide the StandAlone Activity. This module is necessary for the China region. Need to move to common module
- **newPairingActivityModule**
 - This module is used to provide PairingFlow Activity. I know Global Team has already deprecated this Activity. In our China , we still use it right now. **But I can guarantee that we can remove it in our next release.**
- **cloudTermsAndConditionsActivityModule**
 - This module seems to Show the terms and conditions update info. I believed China has already had our own terms and condition feature. It can move to global only modules.
- **welcomeViewModule**
 - This is a WelcomeView. China have our own welcome view. and this can move to global only modules.
- **regionSelectionViewModuleLegacyNavigation**
 - This module is used to provide the region selection view. In our China , we can hardcode the region to CN. This module is not necessary for China region. It can move to global only modules.
- **otaErrorViewModule**
 - This module is used to provide the OTA error view. This module is necessary for the China region. Need to move to common module
- **guidesFeedKoinModule**

- This module is used to provide the feedback feature. This module is not necessary for the China region. Need to move to global only module
- `feedbackModule`
 - This module is used to provide the feedback feature. This module is not necessary for the China region. Need to move to global only module
- `climateEditTimerDaysFragmentKoinModule`
 - This is belonged to `ClimateEditTimerFragment` feature. Sounds like this is used for climate control feature. This module is necessary for the China region. Need to move to common module.

Notes

I don't remember very clearly. It seems like a long time ago we received a request to open this feature for our internal staff who handle vehicle allocations, but it seems like it was abandoned later. Actually, I'm not very sure if these two koin(guidesFeedKoinModule,

feedbackModule) can really be removed.

koinModules04

```
fun koinModules04() = listOf(  
    toolbarManagerModule,  
    widgetKoinModule,  
    statisticsViewModule,  
    utilsModule,  
    chargeStatusViewModule,  
    airCleaningKoinModule,  
    settingsKoinModule,  
    serverConfigKoinModule,  
    policyDataSourceModule,  
    casAdapterKoinModule,  
    locationModule,  
    useCaseModule,  
    subscriptionsUseCaseModule,  
    paymentUseCaseModule,  
    invoicesUseCaseModule,  
    ecommerceMapperModule,  
    supportsNaSubscriptionsUseCaseKoinModule,  
    pushTokenRepositoryModule,  
    countryAndRegionRepositoryModule,  
    cloudMessagingServiceModule,  
    pushDomainModule,  
    postSignInViewModule,  
    postSignInComposeScreenModule,  
    inAppFeedbackDataModule,  
    inAppFeedbackDomainModule,  
) + authViewModule
```

```
val authViewModule = listOf(  
    signInViewModuleComposeNavigation,  
    signInViewKoinModule,  
    reSignInViewModule,  
    oneTimePasswordViewModule,  
    oneTimePasswordViewComposeModule,  
    attemptsLimitErrorViewModule,  
    resendLimitErrorViewModule,  
    accountLockedErrorViewModule,  
    noInternetConnectionErrorViewModule,  
    sessionExpiredErrorViewModule,  
    unknownErrorViewModule,  
    serverDownErrorViewModule,  
)
```

- `toolbarManagerModule`
 - This module is used to provide the toolbar manager. This module is necessary for the China region. Need to move to common module
- `widgetKoinModule`
 - This module is used to provide the widget. This module is necessary for the China region. Need to move to common module
- `statisticsViewModule`

- This module is used to provide the statistics view. This module is necessary for the China region. Need to move to common module
- **utilsModule**
 - This module is like used to provide the remote function related utils. Like store climate timer,provide deviceid or some other things. China needs this module. Need to move to common module
- **chargeStatusViewModule**
 - I'm not sure if this ChargeStatusView is or not deprecated.Cause it still use VocMvpFragment. If it is not deprecated, this module is necessary for the China region. Need to move to common module.
- **airCleaningKoinModule**
 - This module is used to provide the air cleaning feature. This module is necessary for the China region. Need to move to common module
- **settingsKoinModule**
 - This module is used to provide secure preference and device secure checking usecase. China also use this module. Need to move to common module
- **serverConfigKoinModule**
 - This module is used to provide the server config (such as build type,dsb server, cnep server and so on). This module is necessary for the China region. Need to move to common module.
- **policyDataSourceModule**
 - This module is used to provide the policy data source. Looks like this module is used in China region. Need to move to China only module
- **casAdapterKoinModule**
 - This module is used to provide the car image adapter. This module is necessary for the China region. Need to move to common module
- **locationModule**
 - This module is used to provide the location. This module is necessary for the China region. Need to move to common module
- **useCaseModule**
 - This module is used to provide the use case(such as set session,restart application,and other remote function related usecase.). This module is necessary for the China region. Need to move to common module
- **subscriptionsUseCaseModule**
 - This module is used to provide the subscriptions use case. China doesn't use this feature. Need to move to global only module
- **paymentUseCaseModule**
 - This module is used to provide the payment use case. China has our own solution. Need to move to global only module
- **invoicesUseCaseModule**
 - This module is used to provide the invoices use case. China doesn't use this feature. Need to move to global only module
- **ecommerceMapperModule**
 - This module is used to provide the ecommerce mapper and related to subscription. China doesn't use this feature. Need to move to global only module.
- **supportsNaSubscriptionsUseCaseKoinModule**

- This module is used to provide the supports na subscriptions use case. China doesn't use this feature. Need to move to global only module
- `pushTokenRepositoryModule`
 - This module is used to provide the push token repository. China also uses this feature. Need to move to common module
- `countryAndRegionRepositoryModule`
 - This module is used to provide the country and region repository. It used to provide country code in sign in presenter. **Global has already removed this presenter. We China can remove this usage in our next release. We can deprecate this module.**
- `cloudMessagingServiceModule`
 - This module is used to provide the cloud messaging service. China also uses this feature for tsp vehicle push notification. We can move it to China only module
- `pushDomainModule`
 - This module is used to provide the push domain. China need this feature to register device for push. We can move it to common module.
- `postSignInInViewModule`
 - China has our owned post-sign in progress. We can move it to global only module
- `postSignInComposeScreenModule`
 - China has our owned post-sign in progress. We can move it to global only module
- `inAppFeedbackDataModule`
- `inAppFeedbackDataModule`
 - These modules are used to provide the in-app feedback data. China doesn't use this feature. Need to move to global only module
- `authViewModule`
 - China has our own sign-in flow. We can move it to global only module

    getIsNewChargingLocationsServiceRunningUseCaseModule,  
    deleteTspRecentLocationUseCaseModule,  
    startTspChargingNowUseCaseModule,  
    getTspStatusUseCaseModule,  
)
```

- UserModule.domain
- UserModule.data
 - These two modules are provide the domain and data layer dependencies for the user feature.Related account profile. This should move to the common modules
- validateVinUseCaseKoinModule
 - This module provides the dependencies for the validate vin use case. Used in pairing flow. Should move to the common modules
- appLifeCycleModule
 - This module provides the dependencies for the app lifecycle. Used in OTA installation.Should move to the common modules
- serviceHistoryModule
- serviceHistoryRepositoryModule
- serviceHistoryUseCaseModule

- These three modules provide the dependencies for the service history feature. I've no idea what are they used for, I didn't see this feature in China app
- `subscriptionListPARCHViewModule`
- `subscriptionDetailsModule`
 - These two modules provide the dependencies for the subscription feature. China has its own subscription feature, so these two modules should move to the global only module
- `vehicleImageKoinModule`
- `casModule`
 - These two modules provide the dependencies for the vehicle image and cas feature. Also `vehicleImageKoinModule` was marked as deprecated, but still used in the codebase. Should move to the common module
- `policyUpdateLoadViewModule`
- `policyUpdateCNViewModule`
 - For these two modules, `policyUpdateLoadViewModule` is used in the policy update feature globally. This should move to global only modules, and `policyUpdateCNViewModule` is used in the policy update feature for China. Should move to the china only module
- `renewSubscriptionViewModule`
 - This module provides the dependencies for the renew subscription feature. Should move to the global only module
- `inputPinViewModule`
- `newPinViewModule`
 - These two modules are used in pairing flow. Should move to the common modules
- `nonConnectedIntroViewModule`
- `nonConnectedHomeKoinModule`
 - These two modules are used in the non connected feature. Should move to the common module
- `profileTabUseCaseModule`
 - This module is tricky. Although it's named `profileTabUseCaseModule`, it provides a factory for `ShowSubscriptionsUseCase`, which has methods used to determine if a vehicle is already connected. Anyway, this module is only used for `ProfileTabView`, we china app doesn't have this feature, so this should move to the global only module
- `vehicleDetailsKoinModule`
 - This module is used in the vehicle details feature. And this is an analytics module, should move to the common module I'm not sure if this analytics module is still used in global app. Seems this is very legacy car detail view related
- `batteryChargeTimerUseCaseModule`
 - This module is used in the battery charge timer feature related vocmo repository. Should move to the common module
- `fragmentFactoryModule`
 - This module is used to route legacy fragment. Currently it should move to the common module
- `chargeLocationsUseCaseModule`
- `saveNewTspChargeTimerUseCaseModule`
- `editTspChargeTimerUseCaseModule`
- `deleteTspChargeTimerUseCaseModule`

- `getNewTspChargingLocationsUseCaseModule`
- `getIsAcceptedChargingLocationsServiceRunningUseCaseModule`
- `getIsNewChargingLocationsServiceRunningUseCaseModule`
- `deleteTspRecentLocationUseCaseModule`
- `startTspChargingNowUseCaseModule`
- `getTspStatusUseCaseModule`
- These modules are all related remote function. Should move to the common module

Conclusion

Module Name	Global Only	China Only	Common Module

    digitalKeyBlePermissionViewModule,  
    digitalKeyProblemDiagnosisViewModule,  
    beUnboundViewModule,  
    ecarxTheftNotification,  
    ecarxNotificationSettingModule,  
)
```

- `carLocksViewKoinModule`
 - This module is used to provide the car locks view. This module is necessary for the China region. Need to move to common module
- `carLocksComposeKoinModule`
 - This module is used to provide the car locks compose view. This module is necessary for the China region. Need to move to common module
- `remoteControlFeedbackUseCaseModule`
 - This module is used to provide the remote control feedback use case. **Same as the feedback modules before.**
- `Permissions.domainModule`
 - This provide a use-case to request permissions. China needs this module. Need to move to common module
- `startModule`
 - This module is used for StartFragment to perform a click event to navigate to SignInView. China doesn't need this module. Also global has already deprecated StartFragment? Maybe we can directly remove this module.
- `startViewModule`

- Global team has already migrate this fragment to compose. China doesn't need this module. **If StartFragment is deprecated**, this module can be removed.
- `applicationCoroutineScopeModule`
 - This module is used to provide the application coroutine scope. **I'm not sure where it has been used.**
- `deepLinkIntentModule`
 - This module is used to handle deep link. It was used in StartFragment. Also APAC Team use it in BottomTabsActivity. So currently, it should move to common module.
- `dataSharingRepositoryModule`
 - This module is used to provide the data sharing status. It's related to remote control function. It's necessary for the China region. Need to move to common module
- `translationExtensionModule`
 - This module is used to provide the string format utils. This module is necessary for the China region. Need to move to common module
- `FeedbackPrivacyNotice.domainModule`
- `FeedbackPrivacyNotice.viewModule`
 - This module is used to provide the feedback privacy notice. This module is necessary for the China region. Need to move to common module
- `privacySettingsViewModule`
 - This module is used to provide the privacy settings view. Looks like something related to data sharing and authenticated applications. If related data sharing, We China use this too. Should move to common module

image_14.png

- `legacyReleaseNotesNavigatorModule`
 - This module is used to provide the legacy release notes navigator. This module is necessary for the China region. Need to move to common module
- `carLocatorModule`
 - This module is used to related to car locator (find my car) . This module is necessary for the China region. Need to move to common module
- `legacyOtaInAppMessageHelperModule`
 - From the codebase, It seems this module is used to identify a propulsion type for a vehicle. **I'm not sure about this module.**
- `carHomeUseCaseModule`
 - This module is used to provide the car home use case,such as app state, car state, car nickname,car offline status. This module is necessary for the China region. Need to move to common module
- `digitKey3CGuideViewModule`

- digitKeyDetailViewModule
- digitKeyViewModule
- digitalKeyBleViewModule
- digitalKeyBleGuideViewModule
- digitalKeyBleShareGuideViewModule
- digitalKeyBlePermissionViewModule
- digitalKeyProblemDiagnosisViewModule
- beUnboundViewModule
- ecarxTheftNotification
- ecarxNotificationSettingModule
 - Apac team provides these modules. These modules are used only in China region. So it must move to china-only module

Conclusion

Module Name	Global Only	China Only	Common Module
carLocksViewKoinModule	-	-	✓
carLocksComposeKoinModule	-	-	✓
remoteControlFeedbackUseCaseModule	-	-	✓
Permissions.domainModule	-	-	✓

        legacyStatisticsModule,
        legacyServiceAndWarningsModule,
        legacyCarCoordinateModule,
    ) +
    appUpdateViewModules
```

- `appCommunicationUIModules`
 - This module seems to be related to the communication between the app and the user. This module is used in the `appCommunicationApiModule` and `appCommunicationDataModule`.
- `SupportUI.koinModules`
 - This modules seems to be related to the volvo manual. This module is used in China Region. It can be moved to common modules.
- `RemoteFunctionsDomainModule.koinModules`
 - This module seems to create a countdown function. This is used for air-purification feature and remote engine function. This can be moved to common modules. **Also, i don't think use clock to implement a countdown function is a good idea.**
- `permissionsDataModule`, `permissionsViewModule`, `permissionsJavaWrapperModule`
 - This module seems to be related to require the permissions. These modules are used in China region. Need to move to common modules.
- `migrationsModule`, `migrationsDataModule`, `migrationsDomainModule`
 - These modules seems to be migrate the settings to datastore. This is used in China region. Need to move to common modules.
- `weatherDataModule`
 - This module seems to be related to the weather data. This is used in China region. Need to move to common modules.(AQI)
- `c3LifecycleDataModule`
 - This module seems to be related to the all c3 supported remote function. This is used in China region. Need to move to common modules.

- supportDataModule, supportDomainModule
 - Looks like these modules are a composable webview to load some html. Not sure if they are related to Volvo manual.
- iterablePushNotificationModule
 - I don't find any usage in the code base.
- legacyExteriorModule
- legacyStatisticsModule
- legacyServiceAndWarningsModule
- legacyCarCoordinateModule
 - Looks like this is the legacy statistic related. China need these modules and need to move to the common module
- appUpdateViewModules
 - This modules are related to the global force update and recommend update. China has it's own solution. So it can move to global only modules.

Conclusion

Explanation

- DanaosDI.koinModules

- `danaosWebViewModule`
 - I'm not sure about this Danaos server. But this module is just load a WebView.
- `ChargeModule.koinModules`
 - `chargeViewModule`
 - This module is used to show the charging view and related to remote function. this is the view layer. It's needed in China repo. and should move to common modules.
- `RemoteChargingModule.koinModules`
 - `RemoteChargingUI.koinModules`
 - `chargeStatusViewModule`
 - This module is used to get battery info and charging status. China uses this feature and should move to common modules.
 - `chargeLimitSettingsViewModule`
 - This module is used to set the charging limit. China uses this feature and should move to common modules.
 - `chargeLimitViewModule`
 - This module is used to show the charging limit. China uses this feature and should move to common modules.
 - `RemoteChargingDomain.koinModules`
 - `chargeStatusDomainModule`
 - This module is used to get battery info and charging status. China uses this feature and should move to common modules.
 - `chargeLimitDomainModule`
 - This module is used to get/set the charging limit. China uses this feature and should move to common modules.
 - `RemoteChargingData.koinModules`
 - `chargeStatusDataModule`
 - This module is used to get battery status from gRPC. It should move to common modules.
 - `chargeTimerSettingsDataModule`
 - This module is a data layer of charge. It's used to get/set the charging. It's also contains the remote and local data storage. It should move to common modules.
 - `LockClimateWidgetModule.koinModules`
 - `widgetRepositoryModule`
 - `selectCarModule`
 - `lockClimateWidgetModule`
 - `externalBaseModule`
 - `unlockConfirmationModule`
 - `lockWidgetModule`
 - `climateWidgetModule`
 - `widgetDataMapperModule`
 - `parkingClimatizationModule`

- These modules above is related to the lock and climate feature. China uses this feature and should move to common modules.
- `fuelStatusDataModule`
 - This module is used to get fuel status. It contains legacy China uses this feature and should move to common modules.
- `chargeTimerSettingsLegacyDataModule`
 - This module is used to get charging limit property by legacy channel. China uses this feature and should move to common modules.
- `carRangeDomainModule`
 - This module is used to get range whether fuel or electric. China uses this feature and should move to common modules.
- `legacyFuelStatusModule`
 - This is legacy get fuel status. China uses this feature and should move to common modules.
- `updateCalendarModule`
 - This module is used to update the calendar. I didn't see any usage in code base. *I'm not sure about this one*
- `c3AnalyticsDataModule`
 - This is just for analytics. China has our own solution. **We should sit together and decide how to architecture this.**
- `c3AnalyticsDomainModule`
 - This is just for analytics. China has our own solution. **We should sit together and decide how to architecture this.**
- `marketingConsentModules`
 - This modules is not used in China app. In China app, when a user login, IAM will consented for this user. This should move to global only modules.
- `QuickSignIn.dataModule`
- `QuickSignIn.uiModule`
 - China has its own quick sign in feature. This should move to global only modules.
- `helperModule`
 - This is used for provide time format utils, should move to common modules.
- `drivingJournalSettingsViewModule`
 - This module is used to show the driving journal settings. China uses this feature and should move to common modules.
- `observabilityDataModule`
 - This module is used to provide the observability data. China doesn't need this feature and should move to global only modules.
- `SalesSupport.UI.koinModules`
 - `productListViewModule`
 - `productDetailsViewModule`
 - China has its own sales related function, this should move to global only modules.
- `drivingJournalSettingsDataModule`
- `drivingJournalSettingsDomainModule`
 - These two modules are used to provide the driving journal settings. China uses this feature and should move to common modules.

- appCommunicationApiModule
- inboxDataModule
- inboxViewLegacyModule
- inboxViewModule
- appCommunicationDataModule
- appCommunicationDomainModule
- appCommunicationRoomModule
 - These modules above is related to the inbox view. China uses this feature and should move to common modules.
- appRatingModule
 - This module is used to show the app rating dialog. China doesn't use this feature and should move to global only modules.
- deviceTokenRegistrationDataModule
 - Related push token register. China uses this feature and should move to common modules.
- userAttributesDataModule
 - I'm not sure about this one. Looks like it is a related subscription function. China has our own subscription feature. This may need to move to global only modules.
- landingEX30ViewModule
- landingEX30DomainModule
 - I believe China app doesn't need a user to get another app to use ex30 related remote function. @Rui It can move to global only modules.
- legacyCarInformationModule
- legacyLockStatusModule
- WallBoxModule.koinModules
 - WallBoxUI.koinModules
 - wallboxOnboardingViewModule
 - wallboxActivationViewModule
 - wallboxMainViewModule
 - wallboxChargeSettingsViewModule
 - wallboxChargeScheduleViewModule
 - wallboxChargeAmpLimitViewModule
 - wallboxChargingHistoryListViewModule
 - wallboxManageOwnershipViewModule
 - WallboxData
 - wallboxDataModule
 - These modules above is related wall box feature, China has its own wall box feature. This should move to global only modules.
Maybe we can align a high level architecture for this feature
- InsuranceUI.koinModules

- insuranceDetailsViewModule
- insuranceSelectionViewModule
- mapperModule
- InsuranceData.koinModules
 - insuranceDataSourceModule
 - insuranceRepositoryModule
 - insuranceMapperModule
- InsuranceDomain.koinModules
 - insuranceUseCaseModule

• These modules above is about new car insurance. China has its own insurance feature. This should move to global only modules.
- carImagesModule
 - This module is used to get car images. China uses this feature and should move to common modules.
- deviceInfoDataModule
- deviceInfoDomainModule
 - These two modules is used to generate device id for single user. **China also has this feature. But we can use different implementation.** But now this should move to common modules.
- PlugAndChargeDI.koinModules
 - plugAndChargeIntroViewViewModule
 - enterCarPCIDViewModule
 - activationInProgressViewModule
 - Not sure about this feature. Need more investigation. *I'm not sure about this one*
- maintenanceDataModule
- maintenanceDomainModule
- maintenanceViewModule
 - These modules above is related to the maintenance feature. China uses some features related to this feature. So I think this should move to common modules.

Conclusion

koinModules11

```
fun koinModules11() =  
    tripExportViewModule +  
    sentryModule
```

- `tripExportViewModule`
 - This module seems to export drive journal data. This feature is necessary for China region. Need to move to common module
- `sentryModule`
 - This module seems to log crashlytics info. Looks like this function is provided by the third party library. This can move to Global only Also, this module is used in `VocApplication` `get<InitSentryCrashlyticsUseCase>()` function. This function is used in the `VOCApplication` class. Maybe we can also split this line of code into global-only application.

Module Name	Global Only	China Only	Common Module
<code>tripExportViewModule</code>	-	-	✓
<code>sentryModule</code>	✓	-	-

c3Modules

```
fun VOCApplication.c3Modules() = listOf(  
    cnepmobModule,  
    carInformationDataModule,  
    tripsC3DataModule,  
    invocationServiceModule,  
    userManagementServiceModule,

)
```

- `cnepmobModule`
 - This module is used to configure the dependencies for the CNEP Mob feature. This feature is necessary for China region. and it could move to common module
- `carInformationDataModule`
 - This module is used to initialize the car information api. This could be moved to common modules.
- `tripsC3DataModule`
 - This module is used to initialize the drive journal api. This could be moved to common modules.
- `invocationServiceModule`
 - This module is used to initialize the invocation grpc service. From code base, this feature is related to lock/unlock and may need to move to common modules.
- `userManagementServiceModule`
 - This module is used to initialize the user management grpc service. From code base, this feature is related to vehicle-relationship. This feature is necessary for China region. and it could move to common module
- `termsAndConditionsDataModule`
 - This module is used to initialize the terms and conditions api. Our China's terms and conditions are different from global, We use china IAM to let user agree terms and conditions. so this module is not necessary for China region.
- `privacySettingsModule`
 - This module is used to initialize the privacy settings api. From code base, this feature seems to be related to data sharing. This feature is necessary for China region. and it could move to common module
- `statisticsModule`
 - This module is used to initialize the statistics grpc api. This feature is necessary for China region. and it could move to common module
- `servicesDataModule`

- This module seems not used in anywhere except unit test. **I'm not sure about this one.**
- `scopesGrantsDataModule`
 - This module seems not used in anywhere except unit test. **I'm not sure about this one.**
- `statusServiceModule`
 - This module seems to obtain vehicle status, such as flue,battery,climate, It's used in China region and could move to common module
- `marketingConsentDataModule`
 - China has its own consent solution. If there is no other compliance requirement, it can move to global only modules.
- `dtlInternetModule`
 - This module seems to get car location, if so, this could move to common module
- `chronosServiceModule`
 - Not sure where this module used. **And i'm not sure about this one**
- `maintenanceModule`
 - **Seems this module is duplicate with statusServiceModule.** And this code is not used in anywhere

Module Name	Global Only	China Only	Common Module

coilModule

```
fun coilModule() = module {
    single {
        val quarter = 0.25
        val memory = 512L * 1024 * 1024 // 512MB
        val cacheFolder = "image_cache"

        val appContext = androidApplication()

        val interceptors = if (BuildConfig.DEBUG) {
            arrayOf(vcaUserAgent(), loggerInterceptor)
        } else {
            arrayOf(vcaUserAgent())
        }

        ImageLoader.Builder(appContext)
            .okHttpClient {
                buildHttpClient(interceptors = interceptors)
            }
            .networkObserverEnabled(true)
            .memoryCache {
                MemoryCache.Builder(appContext)
                    // Set the max size to 25% of the app's available memory.
                    .maxSizePercent(quarter)
                    .build()
            }
            .diskCache {
                DiskCache.Builder()
                    .directory(appContext.filesDir.resolve(cacheFolder))
                    .maxSizeBytes(memory)
                    .build()
            }
            .components {
                if (Build.VERSION.SDK_INT >= Build.VERSION_CODES.P) {
                    add(ImageDecoderDecoder.Factory())
                } else {
                    add(GifDecoder.Factory())
                }
            }
            // Show a short crossfade when loading images asynchronously.
            .crossfade(true)
            // Enable logging to the standard Android log if this is a debug build.
            .apply { if (BuildConfig.DEBUG) logger(DebugLogger()) }
            .build()
    }
}
```

This module is used for coil initialization. China app also use this to load images. Such as release note. This could be a common module.

Module Name	Global Only	China Only	Common Module
coilModule	-	-	

composableComponentsModule

```
val composeNavigationModules
    get() = listOf(
        routeActivityModule,
        mainComposeActivityModule,
        navHostControllerNavigationModule,
        environmentSelectionBottomSheetViewModule,
        regionSelectionBottomSheetViewModule,
        globalBottomTabModule,
    )
```

- `routeActivityModule`
 - For now, China still use `StartActivity` for the route, and we still didn't adopt the global route, Although we have a plan to adopt the global route, we still need to keep this module and this can move to common module
- `mainComposeActivityModule`
 - We are adopting the global main activity, this can move to common module.
- `navHostControllerNavigationModule`
 - We are adopting the global navigation, this can move to common module.
- `environmentSelectionBottomSheetViewModule`
 - China has our own environment selection View, this can move to global only modules.
- `regionSelectionBottomSheetViewModule`
 - China has our own region selection View, this can move to global only modules.
- `globalBottomTabModule`
 - Looks like this is the configurable bottom tab that we all expected to use. But this is just defined Global bottom tabs. **I believe we China can define our own bottom tabs. This can move to global only modules.**

Module Name	Global Only	China Only	Common Module
<code>routeActivityModule</code>	-	-	✓
<code>mainComposeActivityModule</code>	-	-	✓
<code>navHostControllerNavigationModule</code>	-	-	✓
<code>environmentSelectionBottomSheetViewModule</code>	✓	-	-
<code>regionSelectionBottomSheetViewModule</code>	✓	-	-
<code>globalBottomTabModule</code>	✓	-	-

debugToolsModules

```
object DebugToolsModule {
    val koinModules =
        debugToolsModules +
        featureFlagsModules +
        publicChargingModules +
        insuranceModules
}

private val debugToolsModules = listOf(
    debugToolsNavigationModule,
    debugToolsActivityModule,
    debugToolsViewModule,
)

private val featureFlagsModules = listOf(
    debugToolsFeatureFlagsDataModule,
    debugToolsFeatureFlagsDomainModule,
    debugToolsFeatureFlagsViewModule,
    debugToolsFeatureFlagsConfigurationModule
)

private val publicChargingModules = listOf(
    debugToolsDanaosAuthCredentialsViewModule
)

private val insuranceModules = listOf(
    debugToolsInsuranceViewModule,
)
```

Conclusion

I believe that the debug tools module is a common module. It is used to initialize the debug tools feature. This module is used to configure the dependencies for the debug tools feature. This feature is necessary for debugging and testing purposes. This module could be moved to a common module.

application

```
override fun onCreate() {
    super.onCreate()
    // Temp fix until all references to BaseApplication APPLICATION are removed.
    if (Build.FINGERPRINT == "robolectric") {
        return
    }

    crashReporter.init()

    setupCrashCatcher()

    ProcessLifecycleOwner.get().lifecycle.addObserver(AppLifecycleListener())

    setLogger()

    EcarxHeartBeatUtils.initHeartBeatARouter(this)

    logd(TAG, "OnCreate")

    setupAnalytics()

    registerActivityLifecycleCallbacks(this)

    CountryNameUtil.initializeValues(this)

    DokitHelper.initialize(this)

    startKoin()

    setupServerConfig()

    loadBuildFeatureFlags()

    configureGoogleDataServices()

    get<InitObservabilityUseCase>().invoke()

    get<InitSentryUseCase>().invoke()

    applicationScope.launch {
        get<InitializeInAppFeedbackUseCase>().invoke()
    }

    get<StartPublishingAppLifeCycleChangesUseCase>().invoke()

    setImageLoader()
}
```

```
crashReporter.init()
configureGoogleDataServices()
get<InitObservabilityUseCase>().invoke()
get<InitSentryUseCase>().invoke()
```

```
applicationScope.launch {  
    get<InitializeInAppFeedbackUseCase>()()  
}
```

```
EcarxHeartBeatUtils.initHeartBeatARouter(this)  
CountryNameUtil.initializeValues(this)  
DokitHelper.initialize(this)
```

These should be moved to China only Application

```
loadBuildFeatureFlags()
```

We received earlier that we need to enforce the market as “cn” in the Chinese region. Some modifications may be necessary here.

China-App-Doc

What we did in the last sprint

for china app, we obtain both newbie vehicle relationship and global vehicle relationships

- when loadNewbieVehicle is completed, the app will hold an array of VINS, like [vinA,vinB]
- when loadGlobalVehicle is completed, the app will hold an array of VINS, like [vinB,vinD]
- then app will then compare the two arrays,
 - if the user's current preferred vehicle is in the global vehicle list, then the app will consider the user's current preferred vehicle is already active the remote function.
 - if not , then consider this vehicle as not having actived the remote function.
- to the example i mentioned earlier,
 - the vinA is not actived the remote function, the vinB is actived the remote function.
 - So, if the user's current preferred vehicle is vinA, then the app will consider the user's current preferred vehicle is not actived the remote function. then app will display a view to start create relationship.
 - For the vinB, user will directly display the vehicle control view

For the exceptional scenarios, if loadGlobalVehicle is failed, then the app will hold an empty array, then the app will consider the user's current preferred vehicle is not actived the remote function.

What we done in the last sprint

- We observe loadGlobalVehicle function, if this function is failed, we will navigate to a retry view, and the user will be dericted to the homepage only when the loadGlobalVehicle is successful

but this is still a feature flag, we only rollout 10% of our users. we will rollout 50% of our users in the week if there is nothing wrong.

GlobalConfig

VccServer

```
sealed class VccServer(
    val baseUrl: String,
    val apiKey: String
) {

    object PROD : VccServer(
        baseUrl = "https://gw.consumer.api.volvocars.com",

FeatureFlag

feature flag是global用于快速开启和关闭某个功能的能力，支持灰度及百分比rollout

获取

获取feature flag的retrofit接口及请求参数

```
@Headers(  
    "Content-Type: application/vnd.volvocars.api.voc.featurequery.v4+json",  
    "Accept: application/vnd.volvocars.api.voc.featurelist.v4+json"  
)  
@POST("/voc/configurations/features")  
suspend fun getFeatureFlags(  
    @Body query: QueryParams  
): FeatureFlagsList  
  
@Keep  
@Serializable  
internal data class QueryParams(  
    val client: String? = null,  
    val clientVersion: String? = null,  
    val uuid: String? = null,  
    val userMarket: String? = null,  
    val vin: String? = null,  
    val vehicleMarket: String? = null,  
    val typeCode: String? = null,  
    val modelYear: Int? = null,  
    val latitude: Double? = null,  
    val longitude: Double? = null,  
    val telematicsType: String? = null,  
    val propulsionType: String? = null,  
    val isCodev: Boolean? = null,  
)
```

以下为shell请求示例

```
curl --request POST \  
  --url https://gw.consumer.api.volvocars.com/voc/configurations/features \  
  --header 'Accept: application/vnd.volvocars.api.voc.featurelist.v4+json' \  
  --header 'Content-Type: application/vnd.volvocars.api.voc.featurequery.v4+json' \  
  --header 'User-Agent: vca-android/5.37.0' \

存储

Feature Flag 需要存储在本地，每次启动的时候从服务器异步获取最新的feature flag，然后存储在本地，以便后续使用

使用

```
private suspend fun onFeatureFlagSupportedCloud(featureFlag: String) =
    featuresFlags().map { it.any { cachedFlag -> featureFlag == cachedFlag.id } }
```

PairingFlow

- 当用户需要在app中激活车控时，需要构造一个PairCarModalDestination跳转到激活流程中的第一步

```
data class PairCarModalDestination(  
    val vin: String?,  
) : Destination
```

- 监听传递来的VIN或者用户输入的VIN (ValidateVinFormatUseCase.kt)
 - 当 ValidateVinFormatUseCase 返回为true时,进入下一步
 - 以当前的VIN去检查车辆是否已经被激活 (GetPairedVehicleUseCase.kt)
 - 数据已经在启动app时从C3/WLC/VOCMO 获取过
 - 数据存储在VehicleRepository.kt中
 - 如果车辆已经被激活，跳转到车辆已经被激活弹窗，如果没有，则开始加载车辆车图

```
curl --request GET \  
  --url 'https://gw.consumer.api.volvocars.com/cas/visualizations/vehicles/LYVXEDE8ML489754?client=vocapp' \  
  --header 'Accept: application/vnd.volvocars.api.configuratorassetservice.visualization.v1+json' \  
  --header 'Accept-Language: en-CN' \  
  --header 'VCC-API-Key: 855fec8628e14ba69b0bd8d6a71af78c'
```

返回结果Json如下

```

            "Values": [
                "88",
                "375",
                "435",
                "600",
                "750",
                "768",
                "870",
                "1200",
                "1280",
                "1536",
                "1920",
                "2560",
                "3840",
                "4898"
            ]
        },
        "bg": {
            "Required": false,
            "Values": [
                "00000000",
                "ffffff"
            ]
        }
    },
    "Errors": []
}

```

- 根据返回的json体做如下操作
 - 取出Combinations.Views.exterior.UrlTemplate 作为整体的url的template

```

{baseUrl}/image/dynamic/MY21_2017/536/exterior-
v1/R6/70700/R171/FN02/_/TC06/TP05/_/JT02/GR08/T101/TJ02/TM04/_/CB04/EV02/JB0A/T21A/LF05/_/_/_/_/_/_/_/
_{profile}.{format}?market=cn&client=vocapp

```

- 取出Combinations.UrlTemplateParameters.baseUrl.value[0]替换

```

"https://cas.volvocars.com.cn"

```

- 因为是从inputVin处进入，所以以"Default"替换

- 因为是从inputVin处进入，所以以"png"替换
- 拼接上w=600&bg=00000000
- 最终得出的url是 https://cas.volvocars.com.cn/image/dynamic/MY21_2017/536/exterior-v1/R6/70700/R171/FN02//TC06/TP05//JT02/GR08/T101/TJ02/TM04//CB04/EV02/JB0A/T21A/LF05// / / / /Default.png?market=cn&client=vocapp&w=600&bg=00000000 (https://cas.volvocars.com.cn/image/dynamic/MY21_2017/536/exterior-v1/R6/70700/R171/FN02//TC06/TP05//JT02/GR08/T101/TJ02/TM04//CB04/EV02/JB0A/T21A/LF05// / / / /Default.png?market=cn&client=vocapp&w=600&bg=00000000)
- 获取车辆的基本信息
 - 如果当前rollout了supportsC3VINValidation(参考FeatureFlag.md)
 - 以当前的VIN去检查车辆是否已经被激活 (GetLimitedCarInformationUseCase.kt)
 - GET请求接口获取车辆的基本信息

[illegible]

返回结果如下

```
{
  "vin": "LYVXEED8ML489754",
  "hasOwner": true,
  "hasAnyPairings": true,
  "remoteControlType": "ICUP",
  "accountLinkingType": "SPA_CMA_ANDROID",
  "modelName": "XC40",
  "modelYear": "2021",
  "market": "CN"
}
```

- 成功则可以进行下一步
- 如果当前没有rollout supportsC3VINValidation
 - 以当前的VIN去检查车辆是否已经被激活 `verifyVinConfigurationUseCase.kt` 请求参考

```
curl --request GET \
  --url 'https://gw.consumer.api.volvocars.com/voc/configurations/attributes?clientVersion=voc-android%2F5.37.0&vin=LYVXEDE8ML489754&client=Android' \
  --header 'Accept: application/vnd.volvocars.api.voc.attributes.v3+json' \
```

```
--header 'Authorization: Bearer
eyJhbGciOiJSUzI1NiIsImtpZCI6IlFWVzI2OHJuSlZGdHh2cUs5c214eRwUjlBVV9SUzI1NiIsInBpLmF0bSI6ImYifQ.eyJ

lLn9BXxisfZHxTeVzo4WdQdKyNPyzkctcQ' \
--header 'User-Agent: vca-android/5.37.0' \
--header 'VCC-API-Key: 855fec8628e14ba69b0bd8d6a71af78c' \
--data '{
  "client": "Android",
  "clientVersion": "5.37.0"
}'
```

返回结构如下

```
{
  "externalColor": "CRYSTAL WHITE",
  "trimlineEdition": "Standard",
  "modelDescription": "XC40",
  "modelYear": "2021",
  "typeCode": "1811",
  "vin": "LYVXEDE8ML489754",
  "marketingCode": "CHINA2",
  "serverRegion": "CN",
  "supportsVolvoOnCall": true,
  "supportsRestrictedKey": false,
  "hasElectricalHeaterOnly": true,
  "features": []
}
```

- supportsVolvoOnCall为true 则可进行下一步
- 保存本地缓存。
- 检查配对情况
 - 如果存在supportsC3VINValidation
 - 以remoteControlType为判断条件
 - ICUP 跳转icup配对
 - CLASSIC 跳转tsp配对
 - ACCOUNT_LINKING (未知)
 - NONE
 - HUANFU
 - 如果不存在supportsC3VINValidation

- 先检查车辆的配对状况

```
curl --request GET \
  --url
https://gw.consumer.api.volvocars.com/voc/configurations/pairinginformation/LYVXEDE8ML489754 \
  --header 'Accept: application/vnd.volvocars.api.voc.pairinginformation.v3+json' \
  --header 'Authorization: Bearer
eyJhbGciOiJSUzI1NiIsImtpZCI6IlFWVzI2OHJuSlZGdHh2cUs5c214eRwUjlBVV9SUzI1NiIsInBpLmF0bSI6ImYifQ.eyJ

  --header 'User-Agent: vca-android/5.37.0' \
  --header 'VCC-API-Key: 855fec8628e14ba69b0bd8d6a71af78c'
```

返回结果如下

```
{
  "infotainmentHeadUnitType": "SPA",
  "pairingSupported": true,
  "vin": "LYVXEDE8ML489754"
}
```

- 根据infotainmentHeadUnitType 和 pairingSupported 来判断
 - 如果根据infotainmentHeadUnitType为icup并且pairingSupported为true则跳转icup配对
 - 如果根据infotainmentHeadUnitType为icup并且pairingSupported为false则返回错误，不支持配对
 - 如果根据infotainmentHeadUnitType为其他则跳转tsp配对

TspParingFlow

Step one:InputPin

- 创建人车关系

```
data class VehicleRelationInputDTO(  
    @SerializedName("regNo") val regNo: String? = null,  
    @SerializedName("vin") val vin: String? = null,  
    @SerializedName("pin") val pin: String? = null,  
    @SerializedName("ISO2CountryCode") val iso2CountryCode: String? = null,  
) : Serializable  
  
@Headers(  
    "Accept: application/vnd.wirelesscar.com.voc.CustomerVehicleRelation.v4+json; charset=utf-8",  
    "Content-Type: application/vnd.wirelesscar.com.voc.VehicleRelationInput.v4+json; charset=utf-8"  
)  
@POST("https://vocapi.cn.prod.vocw.cn/customerapi/rest/vehicle-account-relations")  
suspend fun createAccountRelation(@Body vehicleRelationPostDto: VehicleRelationInputDTO):  
CustomerVehicleRelationDTO
```

- 从返回中取出对应的vehicleAccountRelation.vehicle.vehicle
- 循环获取是否长按车机上的onCall

```
/tspVehicles/{vehiclehandle}/connectionStatus
```
